

NOW OFFERING

LOW DOSE CT LUNG CANCER SCREENINGS!

Lung cancer happens when abnormal cells form in the lungs and grow out of control. These cells can form a tumor and can spread to other parts of the body. About 9 out of 10 people with lung cancer die because the disease is found after it has spread.

Are you 55 – 80 years old, smoked for many years, or quit within the last 15 years? You need to consider being screened (tested) for lung cancer with our specific low-dose CT lung cancer exam.

Our providers can also counsel you and prescribe medications to help you quit smoking.

**Don't
be a
statistic!**
